# Phase-2 - Practice Project

## Validation of the user login

### writeup

```
( Start )
    ↓
/ Get userlog / ←─────────────────┐
    ↓                              │
[ check login ]          / display     /
    ↓                    / fail message /
                                   ↑
< userlog        NO ───────────────┘
  login >
    ↓ Yes
/ Get userpass /
    ↓
[ check password ]
    ↓
< login >
    ↓ Yes
/ display message / browser /
    ↓
( End )
```
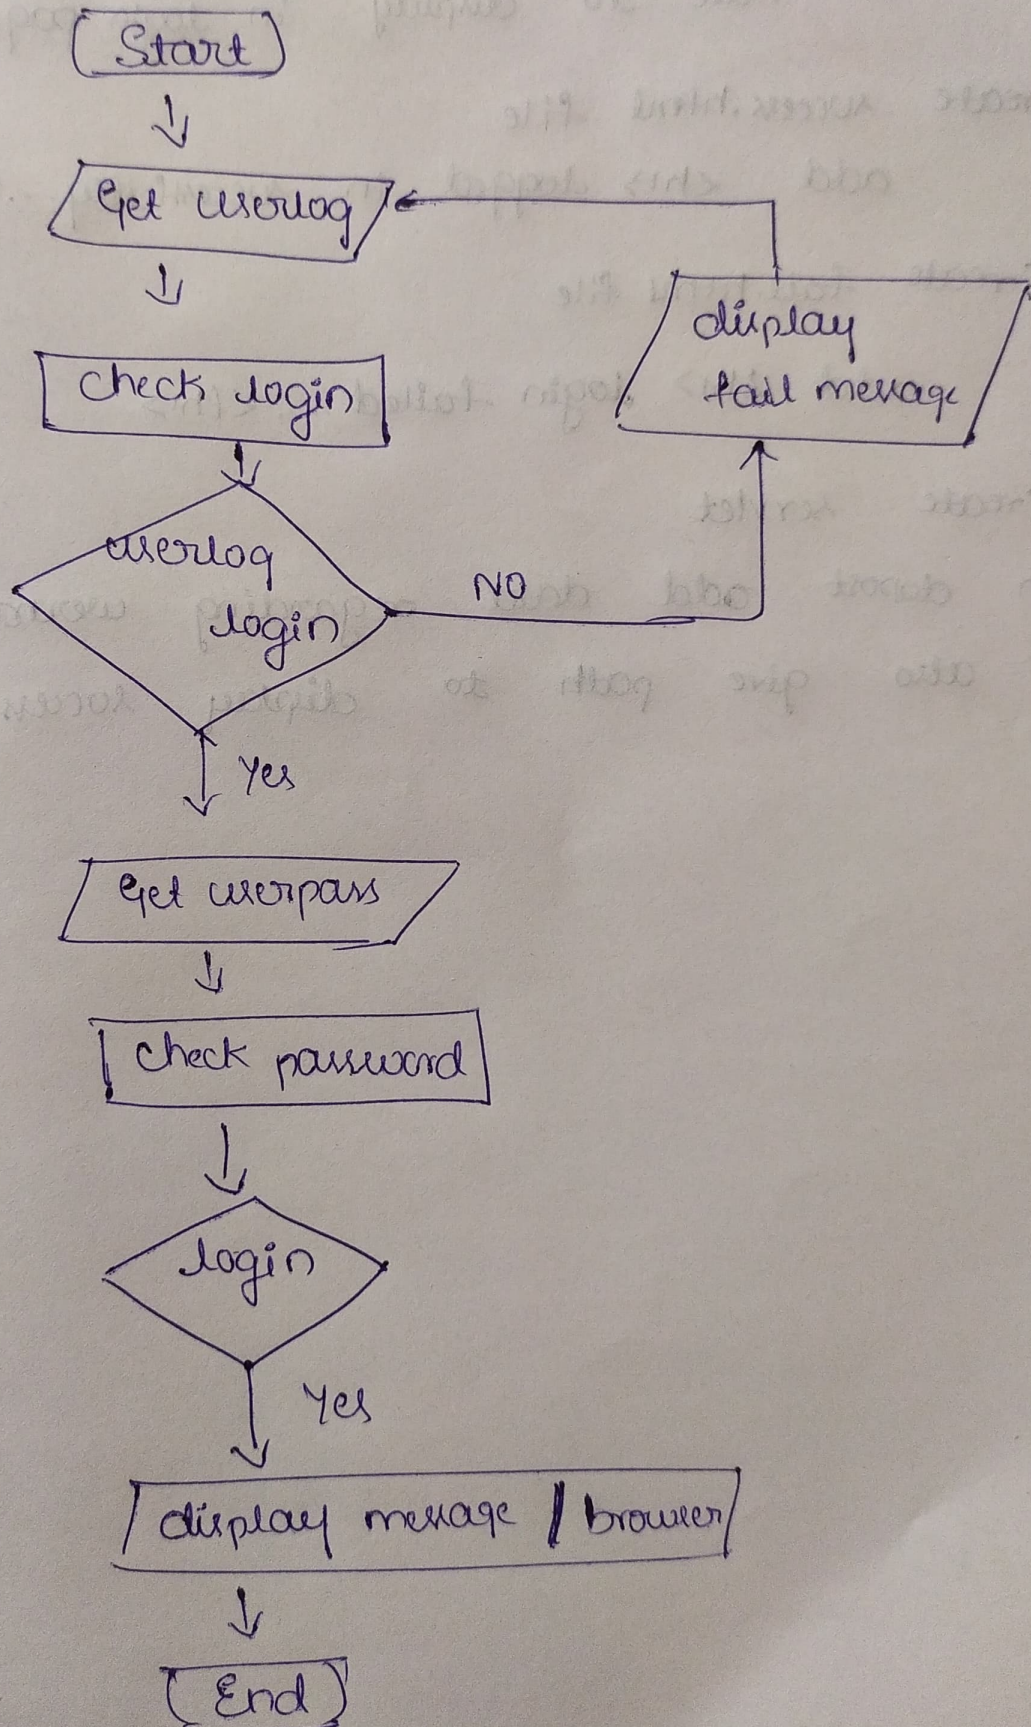

# Steps to create

- Create web.xml file
- Create index.html file in that add data which we have to display in login page
- Create success.html file
  add <h1> logged in successfully...</h1>
- Create fail.html file
  add <h1> login failed ... </h1>
- Create servlet

  in dopost add data regarding username, password & also give path to display success & fail
